Unified databases!

Unified databases

🕐 90 minutes

📋 Copy event link

Minor Changes:

- Added more spacing for the booking confirmation page

Mockups:

Bug fixes:

- **Problem:** Timezone issues when booking an event
  - **Changes/solution:** store convert the time to utc +0 before storing to database then convert it to another timezone when rendering

- **Problem:** Time input initial state is 12AM even if set to 12PM
  - **Changes/solution:** changed the condition for the default values from `defaultValues?.hours > 12` to `defaultValues?.hours >= 12`

- **Problem:** Phone numbers and addresses of attendees aren't stored when booking
  - **Changes/solution:** Retrieved the phone number using a function

- **Problem:** Duplicate email and username are still able to register
    - **Changes/solution:** Removed condition that checks if the email address is verified since unverified e-mails are still allowed to register even if they exist in the database

- **Problem:** long data will break instead of overflowing in event details
    - **Changes/solution:** Added word break

- **Problem:** if current/selected month is January, calendar won't render
    - **Changes/solution:** Changed the condition that renders the calendar

- **Problem:** forms when creating events will overflow
    - **Changes/solution:** added overflow-scroll
